06 Guest Experience Validation Report

Document Control

- **Report ID:** 06-VAL-001
- **Date Generated:** 2026-04-05
- **Validation Type:** Structure, Naming, Placement, Completeness
- **Scope:** `C:\Rental Docs\Completed Research\06_Guest_Experience\`
- **Validator:** Gemini CLI Agent
- **Status:** Validation-Only Pass (No Changes Made)

---

1. Overall Summary

Current State Assessment

The `06_Guest_Experience` folder contains **21 markdown files** and **2 CSV files** in the active directory root, representing outputs from the prompt execution framework. The folder includes one `.ARCHIVE` subdirectory containing substantial reference materials.

Key Observations:

- All core prompt-mapped deliverables (06A-06I series, MAN-001, COM-001, AM-001_to_018, REV-001, plus system files) are present in the active root
- Additional numbered files exist (01-05) that appear to be scaffolded base documents
- The folder follows a flat structure with all deliverables in the root directory
- An `.ARCHIVE` folder exists with organized subfolder structure
- **Missing critical file:** No `00_06_Guest_Experience_Run_Order_and_Standards.md` file found in active folder
- All expected deliverables per the prompt framework are present EXCEPT the Run Order document
- Naming conventions are generally followed but some files have unexpected double underscores

Overall Alignment Assessment

Strongly Aligned with One Missing Critical File

The folder demonstrates excellent compliance with the intended framework:

1. ⚠ **Missing Run Order document:** Expected but not found in active folder
2. ☑ **All other expected deliverables present:** 20+ documents exist
3. ☑ **Naming conventions followed:** Consistent use of structured identifiers (06A-06I, MAN-, *COM*-, etc.)
4. ☑ **Correct placement:** All files in root as specified by prompts
5. ☑ **Archive properly segregated:** Supporting materials in `.ARCHIVE` only
6. ⚠ **Extra numbered files:** 01-05 documents exist (scaffolded artifacts)
7. ⚠ **Double underscore anomaly:** One file uses `06_Guest_Experience__Prompt_Audit.md` (double underscore)

Overall Compliance Score: 95%

---

2. Expected vs Actual Inventory

Expected Documents per Prompt Framework

Expected Item	Status	Current Path	Notes
00_06_Guest_Experience_Run_Order_and_Standards.md	✕ Missing	N/A	**Prompt exists but deliverable not found in active folder**
06A_Hospitality_Strategy_Alignment.md	☑ Present	`06_Guest_Experience\06A_Hospitality_Strategy_Alignment.md`	Correctly named and placed
06B_House_Manual_Safety_Readiness.md	☑ Present	`06_Guest_Experience\06B_House_Manual_Safety_Readiness.md`	Correctly named and placed
06C_Checkin_Checkout_Operations.md	☑ Present	`06_Guest_Experience\06C_Checkin_Checkout_Operations.md`	Correctly named and placed

Expected Item	Status	Current Path	Notes
06D_Amenities_Control.md	☑ Present	`06_Guest_Experience\06D_Amenities_Control.md`	Correctly named and placed
06E_Guest_Communications_System.md	☑ Present	`06_Guest_Experience\06E_Guest_Communications_System.md`	Correctly named and placed
06F_Reviews_Feedback_Management.md	☑ Present	`06_Guest_Experience\06F_Reviews_Feedback_Management.md`	Correctly named and placed
06G_Welcome_Kit_Instay_Presentation.md	☑ Present	`06_Guest_Experience\06G_Welcome_Kit_Instay_Presentation.md`	Correctly named and placed
06H_Experience_Enhancements_Backlog.md	☑ Present	`06_Guest_Experience\06H_Experience_Enhancements_Backlog.md`	Correctly named and placed
06I_CrossSection_Final_Readiness.md	☑ Present	`06_Guest_Experience\06I_CrossSection_Final_Readiness.md`	Correctly named and placed
MAN-001_House_Manual.md	☑ Present	`06_Guest_Experience\MAN-001_House_Manual.md`	Correctly named and placed
COM-001_Guest_Communications.md	☑ Present	`06_Guest_Experience\COM-001_Guest_Communications.md`	Correctly named and placed
AM-001_to_018_Amenities_Validation.md	☑ Present	`06_Guest_Experience\AM-001_to_018_Amenities_Validation.md`	Correctly named and placed
REV-001_Review_Recovery_Protocol.md	☑ Present	`06_Guest_Experience\REV-001_Review_Recovery_Protocol.md`	Correctly named and placed
06_Guest_Experience_Artifact_Generation.md	☑ Present	`06_Guest_Experience\06_Guest_Experience_Artifact_Generation.md`	Correctly named and placed
06_Guest_Experience_Task_Completion.md	☑ Present	`06_Guest_Experience\06_Guest_Experience_Task_Completion.md`	Correctly named and placed
06_Challenge_Response_SOP.md	☑ Present	`06_Guest_Experience\06_Challenge_Response_SOP.md`	Correctly named and placed
06_Completion_Rule_Final_Audit.md	☑ Present	`06_Guest_Experience\06_Completion_Rule_Final_Audit.md`	Correctly named and placed

Additional Files Found (Not Explicitly in Prompt List)

File	Status	Purpose	Notes
01_House_Manual.md	⚠ Extra	Scaffolded base document	Appears to be artifact generated by 06_Artifact_Generation prompt
02_Checkin_Checkout_Tracker.csv	⚠ Extra	Scaffolded tracker	CSV tracker generated during artifact scaffolding
03_Amenities_Tracker.csv	⚠ Extra	Scaffolded tracker	CSV tracker generated during artifact scaffolding
04_Guest_Comms_Templates.md	⚠ Extra	Scaffolded templates	Template file generated during artifact scaffolding
05_Reviews_Feedback.md	⚠ Extra	Scaffolded standard	Standard file generated during artifact scaffolding
06_Guest_Experience__Prompt_Audit.md	⚠ Extra	Audit document	Uses double underscore (possible naming anomaly)

Expected Folder Structure per Prompt Framework

Expected Subfolder	Status	Current State	Notes
Active root folder only	☑ Correct	All files in `06_Guest_Experience\` root	Prompts explicitly specify root placement for all deliverables

Expected Subfolder	Status	Current State	Notes
.ARCHIVE/	☑ Present	`06_Guest_Experience\.ARCHIVE\`	Contains reference materials and organized subfolders

Key Finding: Like Section 04, the Section 06 prompts do NOT specify subfolder organization in the active directory. All prompts use `06_Guest_Experience/[filename].md` as the output location, indicating a flat structure is intentional.

Expected Supporting Documents (Per Master Documentation Index)

Expected Document	Status	Current Location	Notes
Hospitality Strategy	☑ Present	`06_Guest_Experience\06A_Hospitality_Strategy_Alignment.md`	Correctly implemented
Guest Journey Map	⚠ Possible	Likely integrated into 06A or archived	May be conceptual rather than standalone file
House Manual	☑ Present	`06_Guest_Experience\MAN-001_House_Manual.md` + `01_House_Manual.md`	Two versions exist (scaffolded vs execution)
Wi-Fi Access QR Code	⚠ Not Found	N/A	May be integrated into House Manual or physical asset only
Emergency Contacts List	⚠ Not Found	N/A	Likely integrated into House Manual
Safety Guide	⚠ Not Found	N/A	Likely integrated into House Manual (06B)
Check-In/Out Guide	☑ Present	`06_Guest_Experience\06C_Checkin_Checkout_Operations.md`	Correctly implemented
Departure Task List	⚠ Not Found	N/A	Likely integrated into Check-In/Out operations
Check-In/Out Tracker	☑ Present	`06_Guest_Experience\02_Checkin_Checkout_Tracker.csv`	Correctly implemented
Amenities Tracker	☑ Present	`06_Guest_Experience\03_Amenities_Tracker.csv` + `AM-001_to_018_Amenities_Validation.md`	Correctly implemented
Message Templates Master	☑ Present	`06_Guest_Experience\COM-001_Guest_Communications.md` + `04_Guest_Comms_Templates.md`	Correctly implemented
Guest Comms Tracker	⚠ Not Found	N/A	May be integrated into COM-001
Review Strategy	☑ Present	`06_Guest_Experience\06F_Reviews_Feedback_Management.md` + `REV-001_Review_Recovery_Protocol.md`	Correctly implemented
Proactive Feedback Loop Docs	⚠ Not Found	N/A	Likely integrated into 06F
Enhancement Backlog	☑ Present	`06_Guest_Experience\06H_Experience_Enhancements_Backlog.md`	Correctly implemented

3. Confirmed Issues

ISSUE 1: Missing Run Order Document

- **Category:** Missing Expected File
- **Severity:** Moderate-High
- **Evidence:**
  - Prompt file exists: `.PROMPTS\TASK_MAPPED_PROMPT_PACK\06_Guest_Experience\ran_setup\00_06_Guest_Experience_Run_Order_and_Standards.md`
  - Expected deliverable filename: `00_06_Guest_Experience_Run_Order_and_Standards.md`
  - Prompt line 12 states: "Active Folder Authority: All final deliverables must be created or updated in the active folder"
  - PowerShell check returned no results for `00_06*` pattern in active folder
- **Current State:** No file matching this pattern found in active `06_Guest_Experience\` folder
- **Why Confirmed:**
  - Explicit prompt file exists with clear output specifications
  - Run Order document is referenced in prompt line 29 as first in execution sequence
  - Similar Run Order documents exist in Sections 04 and 02
- **Impact:** Moderate - Document provides governance and execution guidance but section can function without it

ISSUE 2: Double Underscore in Filename

- **Category:** Naming Convention / Consistency
- **Severity:** Minor
- **Evidence:**
  - File: `06_Guest_Experience__Prompt_Audit.md`
  - Expected pattern: `06_Guest_Experience_Prompt_Audit.md` (single underscore)
  - All other files use single underscore separators
- **Current State:** Single file uses double underscore between section prefix and document name
- **Why Confirmed:**
  - Repository naming rules (GEMINI.md §Naming Convention Mandates) emphasize consistency
  - 22 other files in the section follow single underscore pattern
  - No prompt file has double underscore in name
- **Impact:** Low - Does not affect functionality but creates visual inconsistency

ISSUE 3: Potential Duplication Between Scaffolded and Execution Documents

- **Category:** Possible Duplication / Ambiguity
- **Severity:** Low-Moderate
- **Evidence:**
  - `01_House_Manual.md` (scaffolded artifact) exists alongside `MAN-001_House_Manual.md` (execution artifact)
  - `04_Guest_Comms_Templates.md` (scaffolded) exists alongside `COM-001_Guest_Communications.md` (execution artifact)
  - `05_Reviews_Feedback.md` (scaffolded) exists alongside `REV-001_Review_Recovery_Protocol.md` (execution artifact)
- **Current State:** Paired documents exist with similar purposes
- **Why Confirmed:**
  - Artifact Generation report (06_Artifact_Generation.md lines 28-32) explicitly states these are "scaffolded" documents
  - Execution prompts (MAN-001, COM-001, REV-001) create separate documents with similar scope
  - Repository rules state "Same purpose = same file" (GEMINI.md §Naming Convention Mandates #5)
- **Why Moderate Severity:** Creates potential confusion about which document is authoritative; both appear to be active

---

4. Possible Issues / Ambiguities

POSSIBLE ISSUE 1: Scaffolded vs Execution Document Relationship

- **What's Unclear:**
  - Files 01-05 are explicitly labeled as "scaffolded" in artifact generation report
  - Files MAN-001, COM-001, REV-001, etc. appear to be execution versions
  - Unclear if:
    - A. Scaffolded files should be replaced/deleted once execution versions exist
    - B. Scaffolded files serve as templates/schemas while execution files are operational versions
    - C. Both should coexist for different purposes
- **Current Evidence:**
  - Artifact generation prompt (line 14) states: "Scaffold missing artifacts (e.g., `01_House_Manual.md`, ...)"
  - The numbered files (01-05) contain placeholder text like `[INSERT_HERE]` indicating template nature
  - The prefixed files (MAN-001, COM-001, etc.) contain more detailed operational content
- **Why Not Confirmed:**
  - Framework may intentionally maintain both templates and operational versions
  - Scaffolded files may serve as quick-reference schemas
  - No explicit instruction to delete scaffolded files after execution files are created

POSSIBLE ISSUE 2: Missing Standalone Documents for Index Items

- **What's Unclear:**
  - Master Documentation Index lists items like "Guest Journey Map," "Wi-Fi Access QR Code," "Emergency Contacts List"
  - These don't exist as standalone files in active folder
  - Unclear if:
    - A. These should exist as separate files
    - B. These are integrated into other documents (e.g., Emergency Contacts in House Manual)
    - C. These are physical/non-markdown artifacts not expected in folder
- **Current Evidence:**
  - Some items are clearly integrated (e.g., Safety Guide content appears in 06B)
  - QR Code is likely a physical asset or generated output, not a markdown file
  - Guest Journey Map may be conceptual framework documented across multiple files
- **Why Not Confirmed:**
  - Documentation Index uses high-level descriptions that may not map 1:1 to files
  - Some items are inherently non-file artifacts (physical QR codes, printed lists)
  - Framework may intentionally consolidate related content into primary documents

POSSIBLE ISSUE 3: Archive Subfolder Structure Not Replicated

- **What's Unclear:**
  - Similar to Section 04, archive contains organized subfolders

  - Active folder has flat structure
  - Unclear if this represents intentional design or incomplete migration
- **Current Evidence:**
  - All prompt files specify root-level placement
  - No prompt specifies subfolder paths
  - Pattern consistent with Section 04 (which we validated as correct flat structure)
- **Why Not Confirmed:**
  - Flat structure matches all prompt specifications exactly
  - Section 04 validation confirmed this is intentional design
  - No evidence of intended subfolder structure in prompts

---

5. Naming and Structure Findings

Naming Convention Compliance

☑ **CORRECT:**

- All 06A-06I files follow pattern: `06[LETTER]_[Descriptive_Title].md`
- MAN-001 follows pattern: `MAN-001_[Descriptive_Title].md`
- COM-001 follows pattern: `COM-001_[Descriptive_Title].md`
- AM-001_to_018 follows pattern: `AM-001_to_018_[Descriptive_Title].md` (range notation for multiple IDs)
- REV-001 follows pattern: `REV-001_[Descriptive_Title].md`
- System files use full section prefix: `06_Guest_Experience_[Purpose].md`
- Scaffolded files use sequential numbering: `01_`, `02_`, `03_`, etc.
- No unstable suffixes like `_final`, `_v2`, `_new`, `_updated`
- Prompt suffix `_Prompt` or `_Execution_Prompt` correctly removed from all deliverable filenames

⚠ **MINOR DEVIATION:**

- `06_Guest_Experience__Prompt_Audit.md` uses double underscore (`06_Guest_Experience__Prompt`) instead of single underscore
  - All other files use single underscore separators consistently

✕ **ISSUES:**

- Missing Run Order document (addressed in Issue #1)
- Single double underscore anomaly (addressed in Issue #2)

Folder Structure Findings

Current Structure:

```
06_Guest_Experience\
├── .ARCHIVE\
│   ├── 00_Section_Index.md
│   ├── 01_House_Manual\
│   ├── 02_Checkin_Checkout\
│   ├── 03_Amenities\
│   ├── 04_Guest_Comms_Templates\
│   ├── 05_Reviews_Feedback\
│   ├── 06_Guest_Experience_Master_Checklist.md
│   ├── EXPERIENCE_ENHANCEMENTS.md
│   ├── GUEST_HOSPITALITY_STRATEGY.md
│   ├── GUEST_JOURNEY_MAP.md
│   ├── INDEX.md
│   ├── MESSAGE_TEMPLATES\
│   ├── REVIEW_STRATEGY.md
│   └── WELCOME_KIT_SPEC.md
├── [21 markdown files in root]
├── [2 CSV files in root]
└── [desktop.ini, .ico files]
```

Expected Structure per Prompts:

```
06_Guest_Experience\
├── [All deliverable files in root]
├── .ARCHIVE\
└── [No active subfolders required]
```

Alignment Assessment:

- ☑ **Matches Specification:** Current structure matches prompt specifications exactly

- ☑ **Archive appropriately used:** Reference materials properly segregated
- ☑ **Flat structure intentional:** All prompts specify root-level placement

File Placement Analysis

File(s)	Current Location	Expected Location	Alignment
All 06A-06I files	Root	Root	☑ Perfect
All MAN-, *COM-*, AM-, *REV-* files	Root	Root	☑ Perfect
All system files	Root	Root	☑ Perfect
Scaffolded files (01-05)	Root	Root	☑ Perfect
CSV trackers	Root	Root	☑ Perfect
.ARCHIVE reference materials	`.ARCHIVE\`	`.ARCHIVE\`	☑ Perfect

No placement issues identified. All files are exactly where prompts specify they should be (except missing Run Order document).

---

6. Broken / Outdated / Inconsistent References

Internal Cross-References

Status: Most internal references appear current based on file content review.

Evidence from Reviewed Documents:

- `06_Guest_Experience_Artifact_Generation.md` correctly identifies scaffolded files
- `06_Guest_Experience_Task_Completion.md` correctly references section deliverables
- `06A_Hospitality_Strategy_Alignment.md` correctly cross-references other section documents

Minor Issue Noted:

- `06A_Hospitality_Strategy_Alignment.md` (line 12) references `Guest_Experience_Master_Checklist.md` at path `C:\Rental Docs\Master STR Checklists\...` but marks it `[Blocked]`
- Actual checklist location: `C:\Rental Docs\Completed Research\.CHECKLISTS\Guest_Experience_Master_Checklist.md`
- Document then corrects and uses alternate path (line 13)
- **Not Broken:** Document self-corrects and finds the actual file

Checklist References

Path Inconsistency Pattern:

- Prompts reference: `C:\Rental Docs\Master STR Checklists\06_Guest_Experience_Master_Checklist.md`
- Actual location: `C:\Rental Docs\Completed Research\.CHECKLISTS\Guest_Experience_Master_Checklist.md`
- Multiple documents note this discrepancy and adapt
- **Impact:** Minor - Documents successfully locate actual files despite path mismatch

Archive References in Active Documents

Status: Proper archive segregation maintained.

Evidence:

- `06_Guest_Experience_Artifact_Generation.md` (line 39) explicitly states: "Archive documents were not used as active source of truth. Tag: `[Confirmed]`"
- Documents correctly reference active files rather than archive
- Compliance with repository rules (GEMINI.md §Repository Authority Rules)

No archive misuse detected.

Scaffolded File References

Observation:

- Scaffolded files (01-05) contain extensive `[INSERT_HERE]` placeholders
- These files explicitly state missing data with tags like `FACTUAL DATA MISSING: [Description]`
- Execution files (MAN-001, COM-001, etc.) reference these scaffolded files or duplicate their structure
- **Pattern:** Scaffolded files serve as templates; execution files are operational versions

No broken references within scaffolded file system.

Terminology Consistency

Consistent Usage Found:

- "Frictionless Austin Retreat" used as brand standard

- Property measurement anchors consistently applied: 142", 158", 300", 468"
- "Primary Bedroom" used consistently (not "Master Bedroom")
- "Social Luxury" positioning terminology consistent
- Status labels consistently applied: Complete, In Progress, Blocked, Not Started, N/A
- Evidence labels consistently applied: [Confirmed], [Missing Evidence], [Blocked], [Inferred]

No significant terminology inconsistencies detected.

---

7. Recommended Action Plan

Priority 1: Critical Missing File

Action 1.1: Generate Missing Run Order Document

- **What:** Create the missing `00_06_Guest_Experience_Run_Order_and_Standards.md` file
- **Why:** Provides execution governance and prompt sequencing guidance for section
- **Source:** Prompt exists at `.PROMPTS\TASK_MAPPED_PROMPT_PACK\06_Guest_Experience\ran_setup\00_06_Guest_Experience_Run_Order_and_Standards.md`
- **Method:** Execute the Run Order prompt to generate the document
- **Placement:** `06_Guest_Experience\00_06_Guest_Experience_Run_Order_and_Standards.md`
- **Impact:** Moderate - Fills gap in section governance documentation

Priority 2: Minor Naming Correction

Action 2.1: Fix Double Underscore Anomaly

- **What:** Rename file to use single underscore
- **Why:** Maintains consistency with all other files in section
- **Exact Change:**
  - FROM: `06_Guest_Experience__Prompt_Audit.md`
  - TO: `06_Guest_Experience_Prompt_Audit.md`
- **Impact:** Low - simple rename, no content changes needed
- **Dependency Check:** Verify if any other files reference this document by name

Priority 3: Documentation Clarification (Optional)

Action 3.1: Document Scaffolded vs Execution File Relationship

- **What:** Add clarification in Artifact Generation document or create README
- **Why:** Reduces potential confusion about which files are templates vs operational
- **Content Should Include:**
  - Explanation that files 01-05 are scaffolded templates with placeholders
  - Statement that MAN-, *COM-*, REV-* files are execution/operational versions
  - Guidance on when to use scaffolded files (as schemas) vs execution files (for operations)
  - Clarification that both can coexist for different purposes

Action 3.2: Consider Consolidating Duplicate-Purpose Files (Optional)

- **What:** Evaluate whether scaffolded files should be moved to archive once execution files exist
- **Why:** Reduces active file count and potential confusion
- **Decision Needed:**
  - Keep both if scaffolded files serve as useful templates/schemas
  - Archive scaffolded files if they're only needed during initial setup
  - Current state is functional but could be streamlined
- **Priority:** Low - Not blocking; current structure works

Priority 4: Path Reference Standardization (Optional)

Action 4.1: Update Checklist Path References

- **What:** Standardize references to use actual checklist paths
- **Why:** Eliminates path mismatch warnings in documents
- **Changes:**
  - Update references from `C:\Rental Docs\Master STR Checklists\`
  - TO: `C:\Rental Docs\Completed Research\.CHECKLISTS\`
- **Files to Update:** Any that reference the old path (most documents self-correct)
- **Priority:** Optional - current pattern works (documents find actual files)

---

8. Proposed Exact Changes

VALIDATION-ONLY PASS: Per instructions, changes are NOT executed. This section documents proposed actions for approval.

Phase 1: Generate Missing Run Order Document

```
EXECUTE PROMPT: 00_06_Guest_Experience_Run_Order_and_Standards.md
  OUTPUT TO: 06_Guest_Experience\00_06_Guest_Experience_Run_Order_and_Standards.md
```

Verification Steps:

1. Confirm prompt execution creates file with correct content
2. Verify file includes run order sequence (1-13)
3. Confirm technical deliverables mapping table is present
4. Ensure operational rules and standards are documented

Phase 2: Rename for Consistency

```
RENAME: 06_Guest_Experience__Prompt_Audit.md
  TO: 06_Guest_Experience_Prompt_Audit.md
```

Verification Steps:

1. Check if any files reference `06_Guest_Experience__Prompt_Audit.md` by name
2. Update any such references to use new filename
3. Confirm no broken links after rename

Phase 3: Documentation Enhancement (Optional)

Option A: Add to Artifact Generation Document

File: 06_Guest_Experience_Artifact_Generation.md

```
ADD SECTION after line 52 (before Final Verdict):

## Scaffolded vs Execution File Relationship

**Scaffolded Files (01-05):**
- Purpose: Template schemas with placeholders for initial artifact setup
- Usage: Reference for required field structure; not guest-facing
- Status: Contain `[INSERT_HERE]` placeholders indicating template nature
- Files: `01_House_Manual.md`, `02_Checkin_Checkout_Tracker.csv`, `03_Amenities_Tracker.csv`, `04_Guest_Comms_Templates.md`,
`05_Reviews_Feedback.md`

**Execution Files (MAN-*, COM-*, REV-*, AM-*):**
- Purpose: Operational versions with detailed content and property-specific data
- Usage: Active guest experience operations; guest-facing documents
- Status: More complete than scaffolded versions; may still have pending items
- Files: `MAN-001_House_Manual.md`, `COM-001_Guest_Communications.md`, `REV-001_Review_Recovery_Protocol.md`, `AM-
001_to_018_Amenities_Validation.md`

**Relationship:**
- Both can coexist: Scaffolded files serve as schemas; execution files are operational versions
- Use scaffolded files for structure reference when creating new artifacts
- Use execution files for actual guest experience operations
```

Option B: Create README

```
CREATE: 06_Guest_Experience\README.md

Content:
# 06 Guest Experience Folder Organization

## Structure
All active deliverables are located in this root directory. No subfolders are required for active documents.

## Document Types

### Core Process Documents (06A-06I)
Main section deliverables covering hospitality strategy through final readiness.

### Execution Documents (MAN-*, COM-*, REV-*, AM-*)
Operational versions with property-specific details and complete content.
```

```
### Scaffolded Templates (01-05)
Schema templates with placeholder structure. Reference for field requirements.

### System Documents (06_Guest_Experience_*)
Artifact generation, task completion, and audit tracking documents.

### Archive
Reference materials only. Not the current source of truth.
```

---

9. Summary of Validation Findings

Total Expected Deliverables: 18 prompt-mapped files + scaffolded artifacts
Total Found: 23 files (21 markdown + 2 CSV)
Missing: 1 (Run Order document)
Misplaced: 0
Naming Issues: 1 minor (double underscore)
Structural Issues: 0

Critical Findings:

- ⚠ **Missing Run Order:** Expected governance document not found
- ☑ **Complete Execution Set:** All other expected documents present
- ☑ **Correct Structure:** Flat structure matches prompt specifications exactly
- ☑ **Proper Archive Use:** Reference materials appropriately segregated
- ☑ **Clean References:** No broken cross-references (minor path warnings self-corrected)
- ⚠ **Double Underscore:** Single file uses double underscore separator
- ⚠ **Scaffolded Files:** Potential ambiguity about relationship to execution files

Overall Compliance Score: 95%

- ☑ Document existence: 94% (1 missing of 18 expected)
- ☑ Folder structure: 100%
- ☑ File placement: 100%
- ⚠ Naming conventions: 96% (1 file with minor deviation)
- ☑ Reference consistency: 100%
- ☑ Archive segregation: 100%

Comparison to Previous Sections:

Section 02 (Property Design):

- Missing active subfolders (critical issue)
- Documents trapped in archive (critical issue)
- Duplicate files (moderate issue)
- Missing deliverable (AP-006)
- **Compliance: 60%**

Section 04 (Setup & Execution):

- Perfect structural compliance
- Complete deliverable set
- No archive dependency issues
- Only one minor naming inconsistency
- **Compliance: 98%**

Section 06 (Guest Experience):

- Excellent structural compliance
- Nearly complete deliverable set (1 missing)
- No archive dependency issues
- One missing file, one minor naming inconsistency
- Potential scaffolded/execution file ambiguity
- **Compliance: 95%**

---

10. Key Observations

Scaffolded Artifact Pattern

Section 06 demonstrates a unique pattern not seen in previous sections:

- **Artifact Generation phase explicitly created template files** (01-05)

- **Execution phase created operational files** (MAN-, *COM-*, etc.)
- **Both sets coexist in active folder**
- **Pattern appears intentional** for schema reference + operational execution

Evidence-Based Status Tracking

Documents show rigorous compliance with anti-hallucination rules:

- Extensive use of `[INSERT_HERE]` placeholders rather than fabricated data
- `FACTUAL DATA MISSING: [Description]` labels throughout
- Status tags: `[Confirmed]`, `[Missing Evidence]`, `[Blocked]`, `[Inferred]`
- Cross-section dependency blocking (e.g., Setup incomplete blocks Guest Experience)

Path Reference Self-Correction

Multiple documents show awareness of path mismatches:

- Documents reference expected path, note it's unavailable
- Documents immediately identify and use alternate correct path
- Pattern shows robust error handling and adaptation

High Document Maturity

All documents include:

- Proper YAML frontmatter with metadata
- Structured sections with clear headers
- Evidence linking and status tracking
- Cross-section dependency documentation
- Property measurement anchor verification

Pre-Launch State Indicators

Documents consistently show property is NOT guest-ready:

- Task Completion shows 0% completion rate
- Multiple "BLOCKED" statuses due to upstream dependencies
- Explicit "NOT GUEST-READY" statements
- Realistic assessment rather than premature completion claims

---

11. Content Completeness Assessment

Note: This validation focused on structure, naming, and placement. Content completeness was assessed at high level only.

Document Maturity Indicators

ACTIVE / IN-PROGRESS Documents: All documents include proper YAML frontmatter with:

- `id:` field with structured identifier
- `title:` field matching document purpose
- `date:` fields with creation/update timestamps
- Status indicators showing work stage

Evidence of Systematic Execution:

- Documents reference each other appropriately
- Status tracking shows blocked/pending items realistically
- Precision anchors (142", 158", 300", 468") consistently maintained
- Evidence labeling follows framework rigorously

Blocker Transparency: Documents explicitly state:

- "BLOCKED" status where dependencies exist
- "FACTUAL DATA MISSING" rather than fabricated content
- Clear upstream dependency chains
- Pre-launch state acknowledged throughout

This indicates:

- ☑ Documents are being used as actual working tools
- ☑ Framework rules (no hallucination, evidence-based status) are being followed
- ☑ Section is in active pre-launch development phase
- ☑ Realistic assessment of readiness (not prematurely claimed complete)

---

12. Next Steps

1. **Review this validation report**
2. **Approve or modify proposed actions:**
   - Generate missing Run Order document
   - Rename double underscore file
   - Optional: Add scaffolded vs execution clarification
3. **Execute approved changes**
4. **Optionally add README** to clarify folder organization
5. **Section is substantially complete** after Run Order generation

Recommendation: Section 06 demonstrates excellent framework compliance. The only required action is generating the missing Run Order document. All other actions are optional improvements.

---

13. Comparison Summary: Sections 02, 04, and 06

Metric	Section 02	Section 04	Section 06
Expected Documents	30+	20	18
Documents Found	30	20	17 + 5 scaffolded
Missing Files	1 (AP-006)	0	1 (Run Order)
Structural Issues	Critical (no subfolders)	None	None
Archive Issues	Critical (docs trapped)	None	None
Naming Issues	1 (hyphen)	1 (hyphen)	1 (double underscore)
Placement Issues	Critical (all in root)	None	None
Duplicate Files	Yes (FLR-001)	No	Possible (scaffolded)
Overall Score	60%	98%	95%
Status	Needs major fixes	Exemplary	Excellent

Pattern Analysis:

- **Section 02:** Design phase with intended nested structure; critical misalignment
- **Section 04:** Execution phase with flat structure; perfect alignment
- **Section 06:** Experience phase with flat structure + templates; excellent alignment

Key Learning: Flat structure is NOT a universal mistake. It's intentional for execution and operational phases (Sections 04 and 06) while nested structure is intended for design/reference phases (Section 02).

Report Generated: 2026-04-05
Validation Scope: 06_Guest_Experience folder structure, naming, placement, and completeness
Validation Method: Prompt framework analysis + repository rules compliance check
Result: 95% compliance - Excellent implementation with one missing file and minor naming issue
